Adaptation
Adaptation

The *BENEslider*

The most classical indication for skeletal anchorage using Mini-Implants with abutments is molar-distalization and/mesialization in the maxilla. By means of the so called "***BENEslider***" the molars can be bodily distalized and/or mesialized using the Mesialslider. In many cases, tooth extraction or dental implants can be avoided.

To couple two ***BENEfit***® Mini-Implants, a ***BENEplate*** with welded wire is connected to the Implants and the ***BENEslider*** parts (mobilizer, springs, ***BENEtube***) are placed on the wire. Active force is applied by springs (240 g or 500 g) and activated with the Mobilizer.

Le système BENEslider

L'indication usuelle d'un ancrage squelettique à l'aide de mini-implants est la distalisation ou mésialisation au maxillaire. Grâce au système ***BENEslider*** *les molaires peuvent être mésialées (Mesialslider) ou distalées (BENEslider). Dans la plupart des cas cela permettra d'éviter les extractions.*

Pour coupler deux mini-implants ***BENEfit***®*, une plaque* ***BENEplate*** *sur arc est connectée aux mini-implants et agrémentée des accessoires* ***BENEslider*** *(Ecrous mobiles d'activation, ressorts,* ***BENEtube****) qui sont fixés sur l'arc. La force est activée par le biais des ressorts (240 gr. ou 500 gr.) et des écrous mobiles d'activation.*

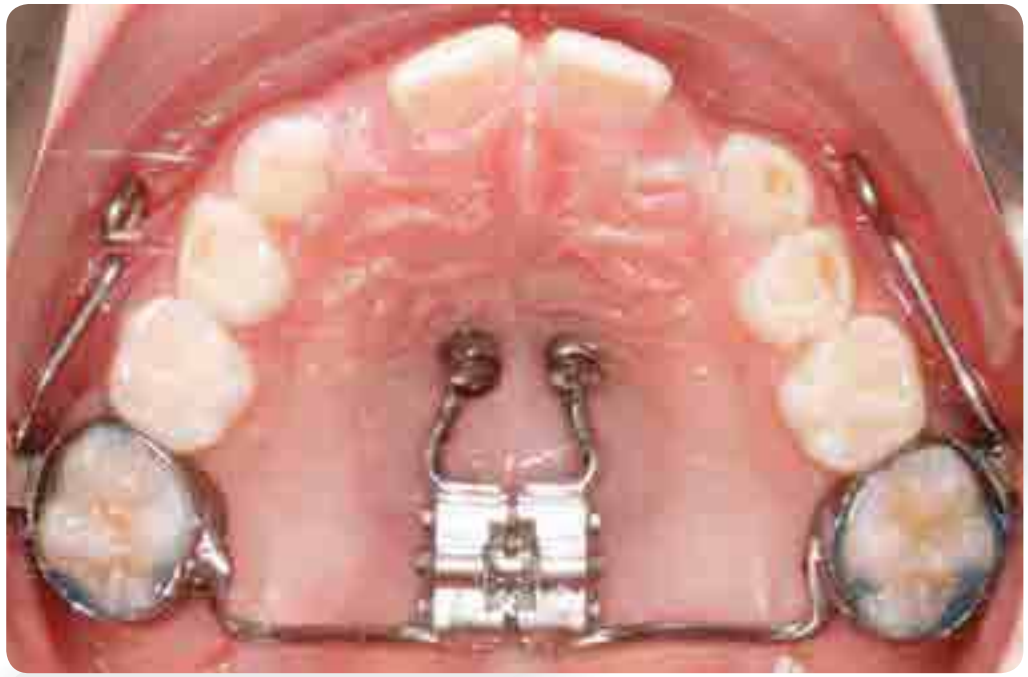
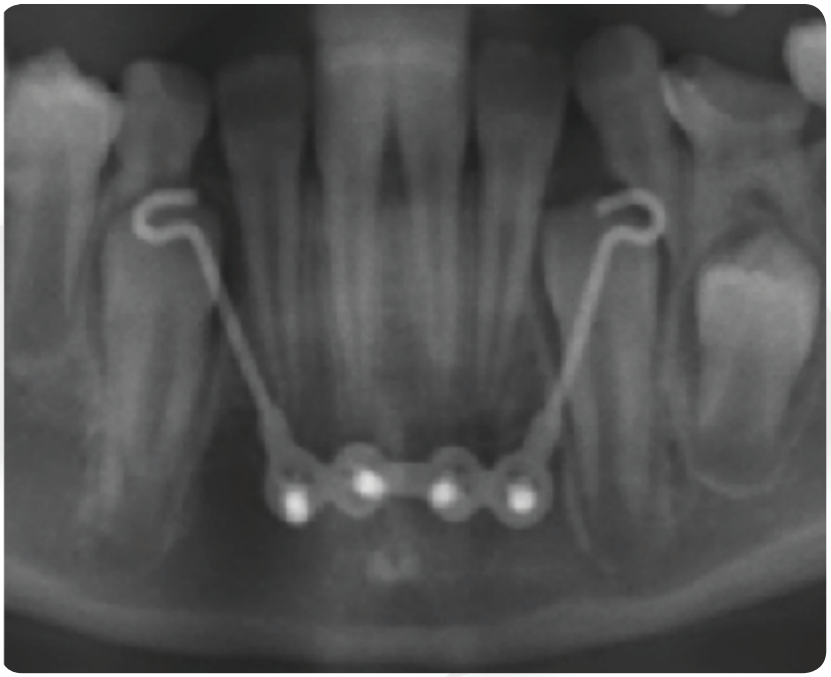
Hybrid-Hyrax and MentoPlate
Hyrax Hybride et MentoPlate

Prof. Dr. Benedict Wilmes, Düsseldorf, Germany





Face mask no longer necessary

Advantages:
– The MentoPlate can be inserted before eruption of the canines we can start at the age of 8 years
– Loosening of the midface sutures (RPE effect)
– Low risk of root injury

Masque facial n'est plus nécessaire

Avantages:
– *La Mentoplate peut être mise en place en amont de l'éruption des canines, possibilité de démarrage du traitement dès 8 ans*
– *Action sur la suture palatine grâce a l'effet RPE*
– *Faible risque de blessure à la racine*

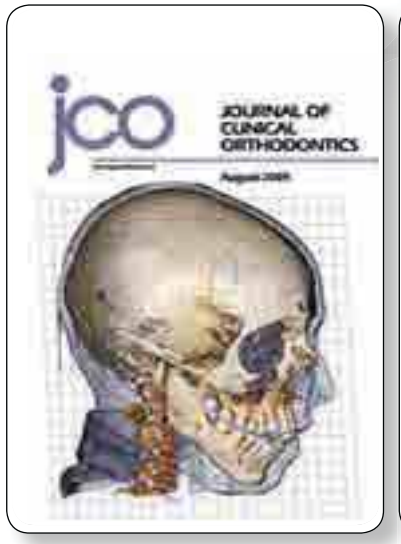
„A Breakthrough in Miniscrew Stability"

Robert G. Keim, Editor JCO

The Editor's Corner J Clin Orthod 2009.43;485-386

www.uniklinik-duesseldorf.de/kieferorthopaedie



Keim: The Editor's Corner

A Breakthrough in Miniscrew Stability

As with all other practical innovations in orthodontics, temporary anchorage devices (TADs) have involved a significant learning curve. Although Creekmore and Eklund's seminal paper on skeletal anchorage appeared in JCO more than 25 years ago,1 it remained on the fringes of the profession until around the turn of the century, when the concept took off like a rocket. Since then, paper after paper has illustrated successful treatment of most categories of malocclusion... [more]
